

ARULJOTHI PIPES

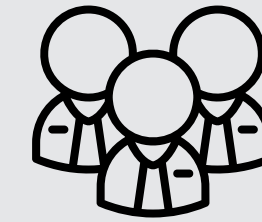

RCC HUME PIPES

WELCOME TO OUR COMPANY

Since 1996, Aruljothi Pipe Works has been committed to delivering top-quality concrete cement pipes, kerb stones, off-round pipes, RCC garden benches, concrete fencing poles, and more. We take pride in our unmatched standards, ensuring that no competitor comes close. Based in Karur, Tamil Nadu, we have earned a strong reputation as an ethically driven company. With a team of over 150 skilled professionals, state-of-the-art infrastructure, and stringent quality control measures, we continue to set new benchmarks in excellence year after year.

As a trusted manufacturer and trader, we have built a state-of-the-art in-house quality testing center, where each product undergoes meticulous inspection across multiple quality parameters. Our success is driven by the visionary leadership of Mr. Kavın, whose sharp business acumen and deep market insights keep us ahead of the competition. With a track record of over 400 successfully completed projects, we continue to set new industry standards.

EMPLOYEES

Workforce of over 150 employees, including three expert site engineers

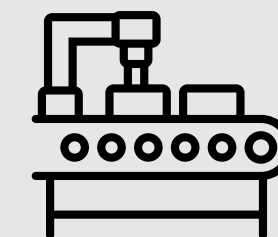

CLIENTS

Esteemed clientele exceeding 400 distinguished clients

YEARS OF EXPERIENCE

Boasting 28 years of unparalleled expertise in manufacturing

PRODUCTION

Manufacturing capacity surpassing 300 units per day

PRODUCT LIST

Concrete Hume Pipes
Kerb Stone
Boundary Wall
Paver Block
Underground Drainage Pipes
[Precast U Shaped Drain]

Cement Pillers
Chambers
Earth Pits
Offcut pipes(or Off Round Pipe)
V-Troughs.

Manhole Covers
RCC Pipes (NP2, NP3, NP4)
Round Concrete Pipe
RCC Hume Pipe
Solid Blocks and Hollow Blocks.

Septic Tanks
Water tanks
RCC bench
Kilometer stone
Fencing Poles.

PRODUCT GALLERY

Our Service

INSTALLATION SUPPORT

We offer a team of skilled professionals to ensure seamless on-site installation of our products

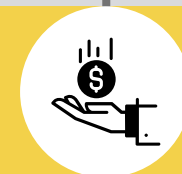

TRANSPORTATION WITH GPS

We ensure reliable deliveries with our own transport fleet, trusted logistics partners, and GPS tracking

WAREHOUSES

We have warehouses in Chennai, Coimbatore, and other major cities for fast delivery

SURPLUS RETURN

Excess products can be returned, and small quantity requests are accommodated

TESTING APPROACHES

01 Hydrostatic pressure test :
Water pressure is applied to a sealed pipe to check its resistance to leaks at a specified pressure level.

02 Three-edge bearing test :
Applying load to the pipe on three edges to evaluate its compressive strength.

03 Absorption test :
Measuring the amount of water a Hume pipe absorbs, indicating the quality of the concrete mix and its potential resistance to water penetration.

04 Infiltration and exfiltration testing :
Infiltration and exfiltration testing assess a concrete pipe's ability to prevent unwanted water entry and leakage, ensuring water-tightness and durability in drainage and sewer systems.

05 Load testing :
To ensure whether they can withstand soil pressure, traffic loads, and other external stresses.

06 Pressure testing :
Assessing the strength and durability of concrete pipes under internal water or air pressure

07 Thickness testing :
Verify whether the concrete pipe meets the required dimensional specifications, ensuring structural integrity and durability.

08 Joint testing :
To ensure whether the connections between the pipes are watertight, structurally sound, and capable of withstanding pressure.

09 Permeability test :
This test ensures that the concrete mix and compaction process provide the necessary water resistance for long-term performance.

10 Straightness test :
Conducted to ensure that concrete pipes are uniformly aligned and free from bends or deviations.
